 2012, AlexNet achieved an error rate of only 16% in ImageNet Large Scale Visual Recognition Challenge

- 2012, AlexNet achieved an error rate of only 16% in ImageNet Large Scale Visual Recognition Challenge
 - Alex Krizhevsky, Ilya Sutskever, Geoffrey Hinton (University of Toronto)

- 2012, AlexNet achieved an error rate of only 16% in ImageNet Large Scale Visual Recognition Challenge
 - Alex Krizhevsky, Ilya Sutskever, Geoffrey Hinton (University of Toronto)
 - 2 GPU, a week, halved the error rate

- 2012, AlexNet achieved an error rate of only 16% in ImageNet Large Scale Visual Recognition Challenge
 - Alex Krizhevsky, Ilya Sutskever, Geoffrey Hinton (University of Toronto)
 - 2 GPU, a week, halved the error rate
 - Open the era of deep learning

- 2012, AlexNet achieved an error rate of only 16% in ImageNet Large Scale Visual Recognition Challenge
 - Alex Krizhevsky, Ilya Sutskever, Geoffrey Hinton (University of Toronto)
 - 2 GPU, a week, halved the error rate
 - Open the era of deep learning
- 2015, Kaiming He (MSRA) proposed ResNet which made machine see better than human (3.6% error rate in ImageNet)

- 2012, AlexNet achieved an error rate of only 16% in ImageNet Large Scale Visual Recognition Challenge
 - Alex Krizhevsky, Ilya Sutskever, Geoffrey Hinton (University of Toronto)
 - 2 GPU, a week, halved the error rate
 - Open the era of deep learning
- 2015, Kaiming He (MSRA) proposed ResNet which made machine see better than human (3.6% error rate in ImageNet)
- 2016, Google DeepMind's AlphaGo defeated 9-dan Go master Lee sedol by 4:1

- 2016, Google DeepMind's AlphaGo defeated 9-dan Go master Lee sedol by 4:1
 - Firstly proposed deep reinforcement learning
- 2018, Google BERT model achieved the state-of-the-art performance in 11 NLP tasks

ImageNet & Deep Neural Network

ImageNet [Feifei Li, Stanford] Large Scale Visual Recognition Challenge

| | LeNet | AlexNet | VGG | GoogleLeNet | ResNet |
|-------------|-------|---------|------|-------------|--------|
| # of Layers | 5 | 8 | 19 | 22 | 152 |
| Top 5 Error | N/A | 16.4% | 7.3% | 6.7% | 3.57% |
| Year | 1994 | 2012 | 2014 | 2014 | 2015 |

This is why it's called "deep" learning

2018 Turing Award

2018 Turing Award: Geoffrey Hinton, Yoshua Bengio, Yann LeCun

"for conceptual and engineering breakthroughs that have made deep neural networks a critical component of computing"

- Geoffrey Hinton: Backpropagation, Boltzmann Machines, Improvements to Convolutional Neural Network (CNN)
- Yoshua Bengio: Probabilistic models of sequences, High-dimensional word embeddings and attention, Generative adversarial networks (GAN)
- Yann LeCun: CNN, backprop, Broadening the vision of neural networks

Impetus of Deep Learning

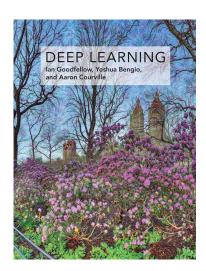

Looking back, we may know what leads to the boom of DL in 2010s

- Large amount of labeled data: ImageNet
- Improvement of hardware: GPU → GPGPU (general-purpose GPU)
- Improvement of algorithms: deep networks, dropout

Introductory Books and Courses

- Feifei Li, Stanford cs231n: Convolutional Neural Networks for Visual Recognition (highly recommended!)
- Chris Manning, Stanford cs224n: Natural Language Processing with Deep Learning
- Ian Goodfellow, Deep Learning Chinese version

Deep Learning

chhzh123 ToolsSeminar

10 / 27

Linear Regression

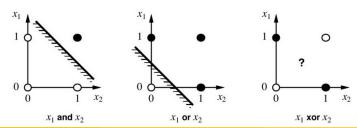

Recall the linear regression problem

$$y = \mathbf{w}^{\mathrm{T}}\mathbf{x} + b = \begin{bmatrix} \mathbf{x}^{\mathrm{T}} & b \end{bmatrix} \begin{bmatrix} \mathbf{x} \\ 1 \end{bmatrix} = \boldsymbol{\theta}^{\mathrm{T}}\mathbf{x}$$

To minimize loss function (MSE)

$$\min_{\boldsymbol{\theta}} L(\boldsymbol{\theta}) = \frac{1}{m} \sum_{i=1}^{m} (y_i - \mathbf{w}^{\mathrm{T}} \mathbf{x}_i - b)^2$$

But linear function can only deal with linearly separable problems

 11 / 27

Powerful Models

Can we build a model that is powerful enough to represent all the functions?

- f(image) = location
- \bullet f(question) = answer
- f(speech) = text
- . . .

Powerful Models

Can we build a model that is powerful enough to represent all the functions?

- f(image) = location
- f(question) = answer
- f(speech) = text
- . . .

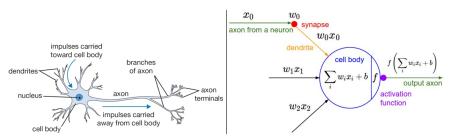

Actually, in ML area, we have built decision tree, SVM, etc., but they usually need feature engineering and are not flexible

Activation Function

Used to add non-linear part to the model, enabling it to approximate much more complex functions

- Sigmoid: $g(z) = 1/(1 + e^{-z})$ (S curve)
- Tanh: $g(z) = \tanh(z)$
- ReLU (Rectified Linear Unit): $g(z) = \max(0, z)$, can avoid gradient vanishing

◆ロト ◆個ト ◆差ト ◆差ト を める○

From one to more

Only one neuron can do limited things, what about more?

• More neurons in width:

A feed-forward network with a single hidden layer containing a finite number of neurons can approximate continuous functions on compact subsets of \mathbb{R}^n .

— The Universal Approximation Theorem

The question is that the theorem does not tell us how many neurons we need

From one to more

Only one neuron can do limited things, what about more?

• More neurons in width:

A feed-forward network with a single hidden layer containing a finite number of neurons can approximate continuous functions on compact subsets of \mathbb{R}^n .

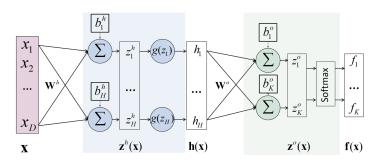

— The Universal Approximation Theorem

The question is that the theorem does not tell us how many neurons we need

 More neurons in depth: We have multi-layer perceptron (MLP) the basic model of nowadays deep learning!

 15 / 27

Multi-Layer Perceptron (MLP) / Fully-connected NN

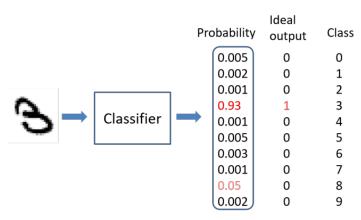

- Input layer: x
- Hidden layer: $h(\mathbf{x}) = g(\mathbf{z}^h(\mathbf{x})) = g(W^h\mathbf{x} + \mathbf{b}^h)$
- Output layer: $f(\mathbf{x}) = \sigma(\mathbf{z}^o(\mathbf{x})) = \sigma(W^o h(\mathbf{x}) + b^o)$
- * Softmax function: change output to probability (K-dimensional)

$$\sigma(\mathbf{z})_j = \frac{\mathrm{e}^{z_j}}{\sum_{k=1}^K \mathrm{e}^{z_k}}$$

Classifier Training

- ullet Find optimal parameters $oldsymbol{ heta}^*$ of a classifier $\mathbf{y} = f(\mathbf{x}; oldsymbol{ heta})$
- Rule: given input \mathbf{x} , classifier output $f(\mathbf{x}; \boldsymbol{\theta})$ should be as close to the ideal output as possible

Classifier Training

Use MSE or other loss function

$$\min_{\boldsymbol{\theta}} \frac{1}{N} \sum_{i=1}^{N} \|f(\mathbf{x}_i; \boldsymbol{\theta}) - y_i\|_2^2$$

Use gradient descent to optimize parameters

$$\boldsymbol{\theta}^{(k+1)} = \boldsymbol{\theta}^{(k)} - \alpha \nabla_{\boldsymbol{\theta}} L(\boldsymbol{\theta})$$

About how to optimize the above function on NN (backpropagation), please read http://cs231n.github.io/optimization-1/

Different Kinds of NN

- CNN (convolutional NN): CV
 - Pooling / subsampling
 - Dropout
 - Residual block
- RNN (recurrent NN): NLP
 - LSTM
 - GRU
- GAN (generative adversarial network): Image generation

Frameworks

20 / 27

Deep Learning Frameworks

Framework: A large package consisting of lots of deep learning primatives/operators, and users can easily call them by API

- Google: Tensorflow (commonly used in industry)
 - Static computation graph
 - Jeff Dean
- Facebook: PyTorch (commonly used in academics)
 - Dynamic computation graph
 - Yangqing Jia, Caffe
- Amazon: MXNet
 - Tianqi Chen (UW → CMU)
- * We focus on PyTorch in this seminar

 21 / 27

PyTorch

PyTorch: A Python-based scientific computing package

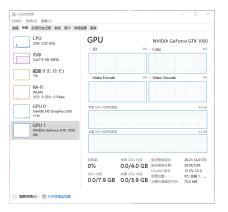

- A replacement for NumPy to use the power of GPUs
- A deep learning research platform that provides maximum flexibility and speed

Since it is highly embedded in Python, PyTorch is very Pythonic and easy-to-use

Pytorch Installation

Firstly check if your computer has discrete graphics card (GPU)

Install Nvidia driver: https://zhuanlan.zhihu.com/p/54350088

ToolsSeminar

- CUDA 10.1
- cuDNN 7

Pytorch Installation

Select your configuration on this website and run the installation command

- Windows: Need to install Anaconda first.
- WSL does not support GPU! Do NOT install Pytorch on WSL!
- Mac does not support GPU too (if you do not have external interface)!

e.g. For Windows with no GPUs

```
pip install torch==1.4.0+cpu torchvision==0.5.0+cpu -f https://

→ download.pytorch.org/whl/torch_stable.html
```

24 / 27

Tutorials

PyTorch has very detailed documentations, make the best of them!

- Tutorials: https://pytorch.org/tutorials/
- Chinese tutorials: https://pytorch.apachecn.org/
- Documentation / API: https://pytorch.org/docs/stable/index.html
- Deep Learning with PyTorch: A 60 Minute Blitz
 - Chinese version
 - You can download the .ipynb file or directly run on Colab

4

Summary

26 / 27

Summary

- Introduction
- Deep Learning Framework: PyTorch
 - Once you get in some trouble concerning PyTorch, you can search the Docs of PyTorch for details. Alternatively you can try to find if there are similar problems on PyTorch Discuss.
- Get through cs231n!
