- 2016, Google DeepMind's AlphaGo defeated 9-dan Go master Lee sedol by 4:1
 - Firstly proposed deep reinforcement learning
- 2018, Google BERT model achieved the state-of-the-art performance in 11 NLP tasks

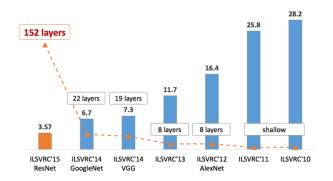

chhzh123 ToolsSeminar Apr 5, 2020 5 / 35

ImageNet & Deep Neural Network

ImageNet Large Scale Visual Recognition Challenge (ILSVRC) [Feifei Li, Stanford]

- Labeled dataset → supervised learning
- 14+ million images, 20,000 categories

This is why it's called "deep" learning

(ロ) 4周 + 4 E + 4 E + 9 Q (O

6/35

2018 Turing Award

2018 Turing Award: Geoffrey Hinton, Yoshua Bengio, Yann LeCun

"for conceptual and engineering breakthroughs that have made deep neural networks a critical component of computing"

- Geoffrey Hinton: Backpropagation, Boltzmann Machines, Improvements to Convolutional Neural Network (CNN)
- Yoshua Bengio: Probabilistic models of sequences, High-dimensional word embeddings and attention, Generative adversarial networks (GAN)
- Yann LeCun: CNN, backprop, Broadening the vision of neural networks (LeNet5)

chhzh123 ToolsSeminar Apr 5, 2020 7 / 35

Impetus of Deep Learning

Looking back, we may know what leads to the boom of DL in 2010s

- Large amount of labeled data: ImageNet (2010)
- Improvement of algorithms: deep networks, dropout (2012)
- Invention of deep learning **systems**: TensorFlow (2015), PyTorch (2016)
- ullet Improvement of **hardware**: GPU o GPGPU (general-purpose GPU)

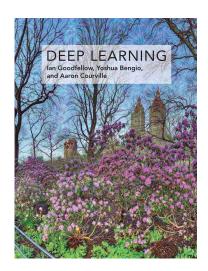

All of them are indispensable and make up the whole DL stack

 chhzh123
 ToolsSeminar
 Apr 5, 2020
 8 / 35

Introductory Books and Courses

- Feifei Li, Stanford cs231n: Convolutional Neural Networks for Visual Recognition (highly recommended!)
- Chris Manning, Stanford cs224n: Natural Language Processing with Deep Learning
- Ian Goodfellow, Deep Learning, Chinese version

2

Deep Learning

chhzh123 ToolsSeminar

Linear Regression

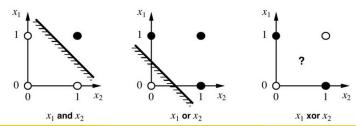

Recall the linear regression problem

$$y = \mathbf{w}^{\mathrm{T}}\mathbf{x} + b = \begin{bmatrix} \mathbf{x}^{\mathrm{T}} & b \end{bmatrix} \begin{bmatrix} \mathbf{x} \\ 1 \end{bmatrix} = \boldsymbol{\theta}^{\mathrm{T}}\mathbf{x}$$

To minimize loss function (MSE)

$$\min_{\boldsymbol{\theta}} L(\boldsymbol{\theta}) = \frac{1}{m} \sum_{i=1}^{m} (y_i - \mathbf{w}^{\mathrm{T}} \mathbf{x}_i - b)^2$$

But linear function can only deal with linearly separable problems

 chhzh123
 ToolsSeminar

 11 / 35

Powerful Models

Can we build a model that is powerful enough to represent all the functions?

- f(image) = location
- f(question) = answer
- f(speech) = text
- . . .

 chhzh123
 ToolsSeminar
 Apr 5, 2020
 12 / 35

Powerful Models

Can we build a model that is powerful enough to represent all the functions?

- f(image) = location
- f(question) = answer
- f(speech) = text
- . . .

Actually, in ML area, we have built decision tree, SVM, etc., but they usually need feature engineering and are <u>not flexible</u>

 chhzh123
 ToolsSeminar
 Apr 5, 2020
 12 / 35

We need to reduce the burden of programmers and make machines more automatic & intelligent

(ロト 4回 ト 4 重 ト 4 重 ト) 重 り 9 0 0

 Apr 5, 2020
 13 / 35

We need to reduce the burden of programmers and make machines more automatic & intelligent

But how?

 chhzh123
 ToolsSeminar
 Apr 5, 2020
 13 / 35

Representation Learning

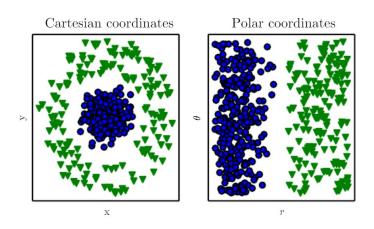

Fig source: Deep Learning book

- 4 ロ ト 4 団 ト 4 豆 ト 4 豆 ト 9 Q C

chhzh123

Representation Learning

Different feature representation affects final performance

 chhzh123
 ToolsSeminar
 Apr 5, 2020
 15 / 35

Representation Learning

Different feature representation affects final performance

Then, let machine learn the feature itself!

 $features \rightarrow mapping \ from \ features \rightarrow output$

e.g.

- Encoder-decoder
- Word embeddings, graph embeddings

 chhzh123
 ToolsSeminar
 Apr 5, 2020
 15 / 35

But...

We may have lots of features...

e.g. figure out what the object is in the photo

- size
- color
- material
- illumination
- view angle
- . . .

Representation learning captures several features, but cannot capture all of them

But...

We may have lots of features...

e.g. figure out what the object is in the photo

- size
- color
- material
- illumination
- view angle
- . . .

Representation learning captures several features, but cannot capture all of them

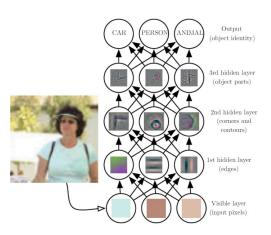

So complex!

chhzh123 ToolsSeminar Apr 5, 2020 16 / 35

Decouple to simple features!

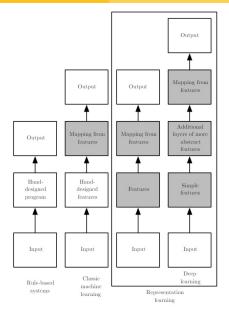

Learn from simple/shallow features and gradually to complex/deep features

Key: Get deeper!

Fig source: Deep Learning book

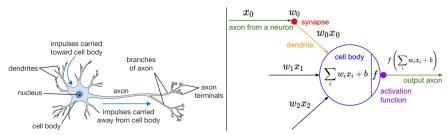

chhzh123 ToolsSeminar Apr 5, 2020 17 / 35

Neuron Model

We can refer to our brain and see how we learn

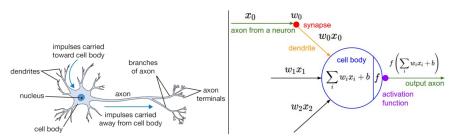

A cartoon drawing of a biological neuron (left) and its mathematical model (right).

Fig source: http://cs231n.github.io/neural-networks-1/

4□ > 4□ > 4 = > 4 = > = 90

Neuron Model

We can refer to our brain and see how we learn

A cartoon drawing of a biological neuron (left) and its mathematical model (right).

Fig source: http://cs231n.github.io/neural-networks-1/

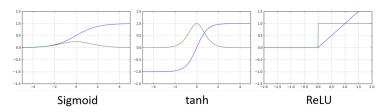

A neuron is just a linear model with activation function!

chhzh123 ToolsSeminar 19 / 35

Apr 5, 2020

Activation Function

Add non-linear part to the model, enabling it to approximate much more **complex** functions (key of NN!)

- Sigmoid: $g(z) = 1/(1 + e^{-z})$ (S curve)
- Tanh: $g(z) = \tanh(z)$
- ReLU (Rectified Linear Unit): $g(z) = \max(0, z)$, can avoid gradient vanishing

chhzh123 ToolsSeminar Apr 5, 2020 20 / 35

From one to more

Only one neuron can do limited things, what about more?

• More neurons in width:

A feed-forward network with a single hidden layer containing a finite number of neurons can approximate continuous functions on compact subsets of \mathbb{R}^n .

— The Universal Approximation Theorem

The question is that the theorem does not tell us how many neurons we need

4□ > 4□ > 4 = > 4 = > = 90

From one to more

Only one neuron can do limited things, what about more?

• More neurons in width:

A feed-forward network with a single hidden layer containing a finite number of neurons can approximate continuous functions on compact subsets of \mathbb{R}^n .

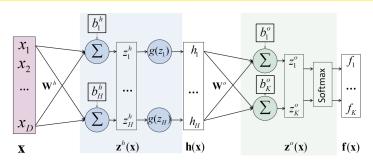

— The Universal Approximation Theorem

The question is that the theorem does not tell us how many neurons we need

 More neurons in depth: We have multi-layer perceptron (MLP) the basic model of nowadays deep learning!

4□ > 4□ > 4 = > 4 = > = 99

Multi-Layer Perceptron (MLP) / Fully-connected NN

• Input layer: x

• Hidden layer: $h(\mathbf{x}) = g(\mathbf{z}^h(\mathbf{x})) = g(W^h\mathbf{x} + \mathbf{b}^h)$

 $\bullet \ \, {\rm Output \ layer:} \ \, f({\bf x}) = \sigma({\bf z}^o({\bf x})) = \sigma(W^oh({\bf x}) + b^o)$

* Softmax function: change output to probability (K-dimensional)

$$\sigma(\mathbf{z})_j = \frac{\mathrm{e}^{z_j}}{\sum_{k=1}^K \mathrm{e}^{z_k}}$$

Classifier Training

- ullet Find optimal parameters $oldsymbol{ heta}^*$ of a classifier $\mathbf{y} = f(\mathbf{x}; oldsymbol{ heta})$
- Rule: given input \mathbf{x} , classifier output $f(\mathbf{x}; \boldsymbol{\theta})$ should be as close to the ideal output as possible

chhzh123 ToolsSeminar Apr 5, 2020 23 / 35

Classifier Training

Use MSE or other loss function

$$\min_{\boldsymbol{\theta}} \frac{1}{N} \sum_{i=1}^{N} \|f(\mathbf{x}_i; \boldsymbol{\theta}) - y_i\|_2^2$$

Use gradient descent to optimize parameters

$$\boldsymbol{\theta}^{(k+1)} = \boldsymbol{\theta}^{(k)} - \alpha \nabla_{\boldsymbol{\theta}} L(\boldsymbol{\theta})$$

About how to optimize the above function on NN (backpropagation), please read http://cs231n.github.io/optimization-1/

4□ > 4□ > 4 = > 4 = > = 90

 chhzh123
 ToolsSeminar
 Apr 5, 2020
 24 / 35

Training

Let's see how NN trains:

Tensorflow Playground

Company of the Company of the Compa

Different Kinds of NN

- CNN (convolutional NN): CV
 - Pooling / subsampling
 - Dropout
 - Residual block
- RNN (recurrent NN): NLP
 - LSTM
 - GRU
- GAN (generative adversarial network): Image generation

3

Frameworks

chhzh123

27 / 35

Deep Learning Frameworks

Framework: A large package consisting of lots of deep learning primatives/operators, and users can easily call them by API

- Google: Tensorflow (commonly used in industry)
 - Static computation graph
 - Jeff Dean
- Facebook: PyTorch (commonly used in academics)
 - Dynamic computation graph
 - Yangqing Jia, Caffe
- Amazon: MXNet
 - Tianqi Chen

```
[Domestic] PaddlePaddle (Baidu), Mindspore (Huawei), MegEngine (Face++), Jittor (Tsinghua)
```

* We focus on PyTorch in this seminar

PyTorch

PyTorch: A Python-based deep learning framework

- A replacement for NumPy to use the power of GPUs
- A deep learning research platform that provides maximum flexibility and speed

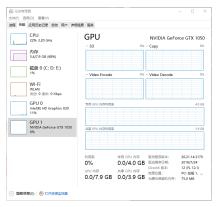

Since it is highly embedded in Python, PyTorch is very Pythonic and easy-to-use

chhzh123 ToolsSeminar Apr 5, 2020 29 / 35

Pytorch Installation

Firstly check if your computer has discrete graphics card (GPU)

Install Nvidia driver: https://zhuanlan.zhihu.com/p/54350088

- CUDA 10.1
- cuDNN 7: Installation guide

Apr 5, 2020

30 / 35

Pytorch Installation

Select your configuration on this website and run the installation command

- Windows: Need to install Anaconda first.
- WSL does not support GPU! Do NOT install Pytorch on WSL!
- Mac does not support GPU too (if you do not have external interface)!

e.g. For Windows with no GPUs

```
pip install torch==1.4.0+cpu torchvision==0.5.0+cpu -f https://
   download.pytorch.org/whl/torch_stable.html
```

Check if GPU works correctly by

```
import torch
print(torch.cuda.is_available())
```

chhzh123 ToolsSeminar Apr 5, 2020 31/35

Tutorials

PyTorch has very detailed documentations, make the best of them!

- Tutorials: https://pytorch.org/tutorials/
- Chinese tutorials: https://pytorch.apachecn.org/
- Documentation / API: https://pytorch.org/docs/stable/index.html
- Deep Learning with PyTorch: A 60 Minute Blitz
 - Chinese version
 - You can download the .ipynb file or directly run on Colab
