## Tools Seminar

Week 3 - C/C++ Toolchain

Hongzheng Chen

Nov 29, 2019

4□ > 4□ > 4 = > 4 = > = 99

 chhzh123
 ToolsSeminar
 Nov 29, 2019
 1 / 42

- Computer System Overview
- C/C++ Programming Language
  - C/C++ Introduction
  - Compiling and Running C/C++
  - Auto Building
  - Debugging
  - Testing
  - Profiling
- Summary

# Computer System Overview

 chhzh123
 ToolsSeminar
 Nov 29, 2019
 3 / 42

## Some Introductory Books & Courses You Need to Know

#### UC Berkeley CS Major Lower Division Degree Requirements (61 Series)

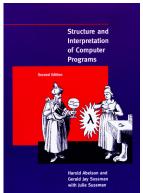

- 61A: Structure and Interpretation of Computer Programs
- 61B: Data Structures
- 61C: Great Ideas in Computer Architecture (Machine Structures)

#### MIT EECS General Institute Requirements

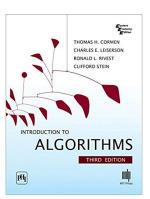

- 6.001: Structure and Interpretation of Computer Programs
   → 6.0001 Python
- 6.006: Introduction to Algorithms
- 6.004: Computation Structures

# **TIOBE Ranking**

#### Nov 2019 Ranking

Nov 2019	Nov 2018	Change	Programming Language	Ratings	Change
1	1		Java	16.246%	-0.50%
2	2		С	16.037%	+1.64%
3	4	^	Python	9.842%	+2.16%
4	3	•	C++	5.605%	-2.68%
5	6	^	C#	4.316%	+0.36%
6	5	•	Visual Basic .NET	4.229%	-2.26%
7	7		JavaScript	1.929%	-0.73%
8	8		PHP	1.720%	-0.66%
9	9		SQL	1.690%	-0.15%
10	12	^	Swift	1.653%	+0.20%

Actually in 9102, most of the CS top schools in US use Python as their introductory language.

→□▶ →□▶ → 重▶ → 重 → りへ(

Actually in 9102, most of the CS top schools in US use Python as their introductory language.

So why we still use C?

- Speed: Very close to hardware, extremely fast → \*High performance computing (HPC)
  - Parallel computing: OpenMP, MPI
  - Specific accelerator: cuda, Verilog

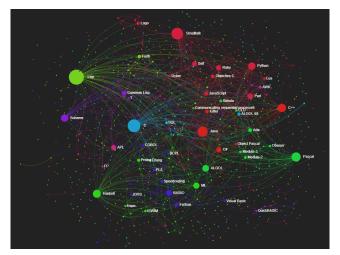

- Portability:
  - OS
  - Networking
  - Embedded systems
- Stability: Static type & rigorous spec
  - Compiler / Interpreter

12 / 42

chhzh123 ToolsSeminar Nov 29, 2019

C influences lots of PLs which all has C-like grammar (Java, C#)

Source: Programming Languages Influence: Network ← ■ → ← ■ →

• Superset of C, but not only C

$$C++ \neq C + STL!$$

◆ロ > ◆個 > ◆ 種 > ◆種 > 種 ● り Q ○

Superset of C, but not only C

$$C++ \neq C + STL!$$

• Object-Oriented Programming (OOP) support

Superset of C, but not only C

$$C++ \neq C + STL!$$

- Object-Oriented Programming (OOP) support
  - Abstraction & Encapsulation

Superset of C, but not only C

$$C++ \neq C + STL!$$

- Object-Oriented Programming (OOP) support
  - Abstraction & Encapsulation
  - Enable to distribute works in a large project

Superset of C, but not only C

$$C++ \neq C + STL!$$

- Object-Oriented Programming (OOP) support
  - Abstraction & Encapsulation
  - Enable to distribute works in a large project
- Modern language features

Superset of C, but not only C

$$C++ \neq C + STL!$$

- Object-Oriented Programming (OOP) support
  - Abstraction & Encapsulation
  - Enable to distribute works in a large project
- Modern language features
  - Templates and Generic Programming: Polymorphism
  - C++11 standard

Superset of C, but not only C

$$C++ \neq C + STL!$$

- Object-Oriented Programming (OOP) support
  - Abstraction & Encapsulation
  - Enable to distribute works in a large project
- Modern language features
  - Templates and Generic Programming: Polymorphism
  - C++11 standard
- Also lightweight, fast, and high-performance

◆ロ > ◆個 > ◆ 種 > ◆種 > 種 ● り Q ○

2.2

Compiling and Running C/C++

 chhzh123
 ToolsSeminar
 Nov 29, 2019
 15 / 42

# Some Compilers for C/C++

- gcc/g++: GNU Compiler Collection
  - MinGW (Minimalist GNU for Windows)
- clang/clang++
  - Low Level Virtual Machine (LLVM) [UIUC, CGO'04]
  - ullet ightarrow commonly used for building your own compiler for DSL
- Visual Studio C++
  - Mainly for Windows applications development
- icc/icpc: Intel C/C++ Compiler
  - Extremely high-performance when compiling to Intel CPU architecture
  - Need a student account

16 / 42

chhzh123 ToolsSeminar Nov 29, 2019

# Four stages of Compilation

```
// hello.c
#include <stdio h>
int main(void) {
   printf("Hello world!\n");
   return 0:
}
```

```
; hello.s
    .string "Hello world!"
main:
    ; protect state
    push
            rbp
            rbp, rsp
    ; call function
            edi. OFFSET FLAT: .LCO
    call.
            puts
    : restore state & return
    mov
            eax. 0
    pop
            rbp
    ret
```

```
hello.c
        hello.i
           Compilation
        hello.s
hello.o(bj) + printf.o
       (Binary)
         hello
```

<ロ > ← □

17 / 42

#### Try this:

```
// student.c
#include "name.txt"
#include "number.txt"
```

#### Use C preprocessor (cpp) to generate output

```
$ cpp student.c -o student.out
$ cat student.out
```

18 / 42

chhzh123 ToolsSeminar Nov 29, 2019

#### You can include several times

```
#include "name.txt"
#include "name.txt"
#include "name.txt"
#include "number.txt"
#include "number.txt"
#include "number.txt"
```

But it's very dangerous due to dependency  $\rightarrow$  function redefinition

#### Make sure the file is only included once:

```
#ifndef NAME_TXT
#define NAME_TXT
Alice
Bob
Carlo
#endif // NAME_TXT
```

<ロ > ← □

Make sure the file is only included once:

```
#ifndef NAME_TXT
#define NAME_TXT
Alice
Bob
Carlo
#endif // NAME_TXT
```

Preprocessor macros are very ugly! C++20 proposes Modules (import)

# Compilation & Assembly

```
$ gcc avg.c -c -o avg.o
$ objdump -dC avg.o
```

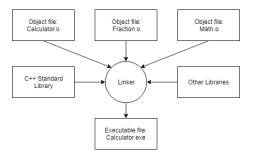

- Online editor and compiler: Repl.it
- Online assembly code generation: GodBolt

Ref: ECE 2400

# Linking

```
$ gcc avg.o -o avg
```

- Static library: .a (Linux), .lib (Windows)
- Dynamic library: .so (Linux), .dll (Windows)

# Compilation Flags

When you configure C environment in VS Code, you need to add them

- -o: output to file
- -0: -00, -01, -02, -03 (See gcc optimization options)
- -Wall: with all warnings
- -Werror: all warnings to errors
- -D[FLAG] or -D[FLAG]=VALUE: pass preprocessor flag #if FLAG ...
- -std=c++11: standard
- -I: [/path/to/header-files] (.h, .hpp)
- -L: [/path/to/shared-libraries]
- -1: Links to shared library or shared object (.so, .dll)

Ref: https://caiorss.github.io/C-Cpp-Notes/compiler-flags-options.html

## **Auto Building**

 chhzh123
 ToolsSeminar
 Nov 29, 2019
 24 / 42

# **Existing Problems**

- Programs with hard dependency, say projects with 100k LoC
- Intractable to enter a bunch of commands
- Some unmodified files will be regenerated

4□ > 4□ > 4 = > 4 = > = 9 < 0</p>

# **Existing Problems**

- Programs with hard dependency, say projects with 100k LoC
- Intractable to enter a bunch of commands
- Some unmodified files will be regenerated

We need auto compilation tools!

#### Makefile

#### Put previous commands together

```
avg: avg.o
gcc avg.o -o avg
avg.o:
gcc avg.c -c -o avg.o
```

Just type make!

 chhzh123
 ToolsSeminar
 Nov 29, 2019
 26 / 42

### Makefile - Grammar

target : prerequisite0 prerequisite1 prerequisite2
<TAB>command

- First finish prerequisite
  - If pre does not change, skip it
  - If pre changes, re-generate it
- When all the pre are finished, do command
  - Can be ANY Linux command!

chhzh123 ToolsSeminar Nov 29, 2019 27 / 42

<□▶ <Ē▶ <Ē▶ (Ē) 및 ♡Q♡

28 / 42

## Makefile - Auto Variables

- \$0: Target file
- \$^: all prerequisite
- \$<: The first prerequisite
- %: wildcard

```
CC = gcc
FI.AGS = -0.3
%: %.c
        $(CC) $(FLAGS) $< -o $@
```

#### Compared with

```
avg:
        $(CC) avg.c $(FLAGS) -o avg.o
```

chhzh123 ToolsSeminar Nov 29, 2019 29 / 42

◆□ > ◆圖 > ◆圖 > ◆圖 >

900

## Makefile - .PHONY

- .PHONY: not associated with physical files; target is always out-of-date
- Put it at the back of Makefile

```
* For complete usage of Makefile,
please refer to https://chhzh123.github.io/2019-02-24-makefile/
```

◆ロト ◆回 ▶ ◆差 ▶ ◆差 ▶ ○ ● ・ りゅ○

chhzh123 ToolsSeminar Nov 29, 2019 30 / 42

## **CMake**

```
cmake_minimum_required(VERSION 2.8)
enable_language(C)
add_executable( avg avg.c )
```

#### Need to install CMake first (apt-get install)

```
$ cmake .
```

\$ make target

31 / 42

chhzh123 ToolsSeminar Nov 29, 2019

2.4

Debugging

chhzh123 ToolsSeminar Nov 29, 2019 32 / 42

## **Debugging**

## The GNU Debugger (GDB)<sup>1</sup>

- gcc -g: Add debug flag
- gdb program: Debug program (from the shell)
- run -v: Run the loaded program with the parameters
- bt: Backtrace (in case the program crashed)
- info registers: Dump all registers
- break 10: Breakpoint at line 10

<sup>1</sup>source: Wiki

chhzh123

2.5

Testing

chhzh123 ToolsSeminar Nov 29, 2019 34 / 42

### **CTest**

```
#include <stdio.h>
#include "avg.h"
#include "utst.h"

int main()
{
   UTST_ASSERT_INT_EQ( avg( 10, 20 ), 15 );
   return 0;
}
```

<□ > 4Ē > 4Ē > 4Ē > 1Ē → 9 < 연

#### **CTest**

```
cmake_minimum_required(VERSION 2.8)
enable_language(C)
enable_testing()

add_executable( avg avg.c )
add_executable( avg-test avg-test.c )
add_test( avg-test avg-test )
```

#### Туре

```
$ make avg-test
$ make test
```

Change the number and regenerate it

4 □ ト 4 同 ト 4 三 ト 4 三 ・ り Q ○

### Other Tools

- Google Unit Test: Google Test
- Code Coverage: gcov
- Continuous Integration: Travis-CI, Codecov.io

chhzh123 ToolsSeminar Nov 29, 2019 37 / 42

Profiling

2.6

**Profiling** 

chhzh123 ToolsSeminar Nov 29, 2019 38 / 42

## **Profiling**

#### Timing:

• <time.h>

```
void timing()
{
    time_t start,stop;
    start = time(NULL);
    foo(); // do something
    stop = time(NULL);
    printf("Time:%ld\n",(stop-start));
}
```

- time <command>
  - Real: Wall clock time time from start to finish of the call
  - User: Amount of CPU time spent in user-mode code (outside the kernel)
  - Sys: Amount of CPU time spent in the kernel

◆ロト ◆母 ト ◆ 恵 ト ◆ 恵 ・ り へ ○

39 / 42

## **Profiling**

- perf (Linux): CPU, cache, memory etc.
- pcm (Intel): CPU, cache, memory etc.
- valgrind [PLDI'07]: memory management

chhzh123 ToolsSeminar Nov 29, 2019 40 / 42 3

# Summary

41 / 42

# Week 2 - C/C++ Toolchain

- Compiling: gcc, clang
- Auto building: Makefile, CMake
- Debugging: gdb
- Testing: CTest
- Profiling: time, perf, valgrind

chhzh123 ToolsSeminar Nov 29, 2019 42 / 42
